

Flame Proof Motors For Hazardous Environment

JHX

ABB

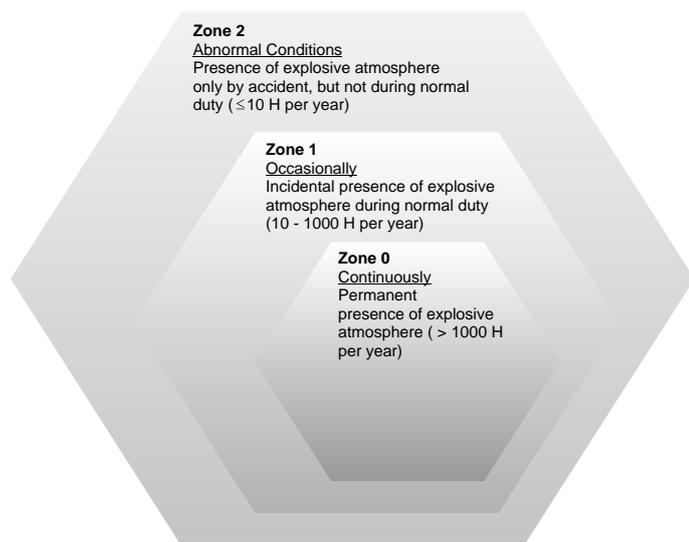

Introduction

The use of electrical motors in potentially explosive atmospheres is quite frequent these days. These motors have to be constructed in such a way that there is no risk of an explosion. An Explosion occurs when the following situations occur:

- presence of potentially explosive atmosphere
- existence of a source of ignition
- possibility of transmission of the explosion

Classification of Hazardous Environment:

According to IS: 5572, Hazardous areas are classified in the following ways depending on the degree of probability of the presence of hazardous atmosphere.

Zone	Criteria presence of gas
Zone 0	Continuously of very long period
Zone 1	Present in normal operations
Zone 2	Unlikely, but if present, only for a short time

In Zone 0, no electrical motors can be installed. Most common motor for Zone 1 is the flameproof design, but it can also be used in Zone 2.

Application Groups:

Depending on the intended use, explosion-proof electrical operating equipment is divided into two major groups:

Group I	Equipment for coal mines (only specially designed motors for mines can be used)
Group II	Electrical equipment for use other than mines (surface industry)
Group II	motors with flameproof enclosures are still further divided into gas groups:
II A	Propane
II B	Ethylene
II C	Hydrogen

Temperature Classes:

Combustible gas or vapour and explosion-protected electrical equipment are divided into temperature of the gas or to T6 with regard to the ignition temperature of the gas or vapour and the maximum surface temperature of the component.

Temperature class	Ignition temperature for the gas / vapour °C	Maximum permitted temperature of electrical equipment °C
T1	>450	450
T2	>300 <450	300
T3	>200 <300	200
T4	>135 <200	135
T5	>100 <135	100
T6	>85 <100	15

Flame proof motors, type "d"

ABB motors of flame proof design (type JHX) are TEFC, 3 phase squirrel cage induction motor (as per IS:2148 - 2004) for operation in hazardous location classified as Zone 1 and Zone 2 areas as per IS:5572

Note: Other frame sizes are available on request.

The motor enclosure has been designed in such a way that no internal explosion can be transmitted to the explosive atmosphere surrounding the machine. The enclosure must withstand, without damage, any pressure levels caused by an internal explosion, the shape, length and gap of part assembly joints at shaft opening, cable entries, etc., shall be designed to allow for throttling and cooling of hot gases escaping outside. The standard emphasise the impact of an explosive atmosphere (for instance, explosion pressure) over constructional requirements of such apparatus.

Range:0.25 15kW, 0.3320hp

Frame:JHX71JHX160

Pole:28

Features:

1. Motors suitable for high ambient temperature 50°C.
2. Keeps an explosion which takes place inside the enclosure from propagating through gaps to the ambient.
3. Withstands the explosion pressure created inside the enclosures.
4. Benefits when dealing with special operating modes such as heavy stars and special applications.
5. All surface temperatures are selected to comply with the temperature class.
6. Suitability for use in temperature classes T1 toT4.
7. Can be used both in Zone 1 and Zone 2.

TEFC, S1 Duty
 415 ± 10% V, 50 ± 5%Hz.
 Combined Variation of ±10%

Insulation Class F, Ambient Temp. = 50° C
 Temperature rise class B (70° C)
 Gas Group IIA & IIB

I_n = Nominal or rated current

I_s = Starting current

Note : 1. All performance figures are subject to IS tolerances.

T_n = Nominal or rated torque in Nm

T_s = Starting torque

2. Max. load GD² has been calculated assuming load torque is proportional to square of speed.

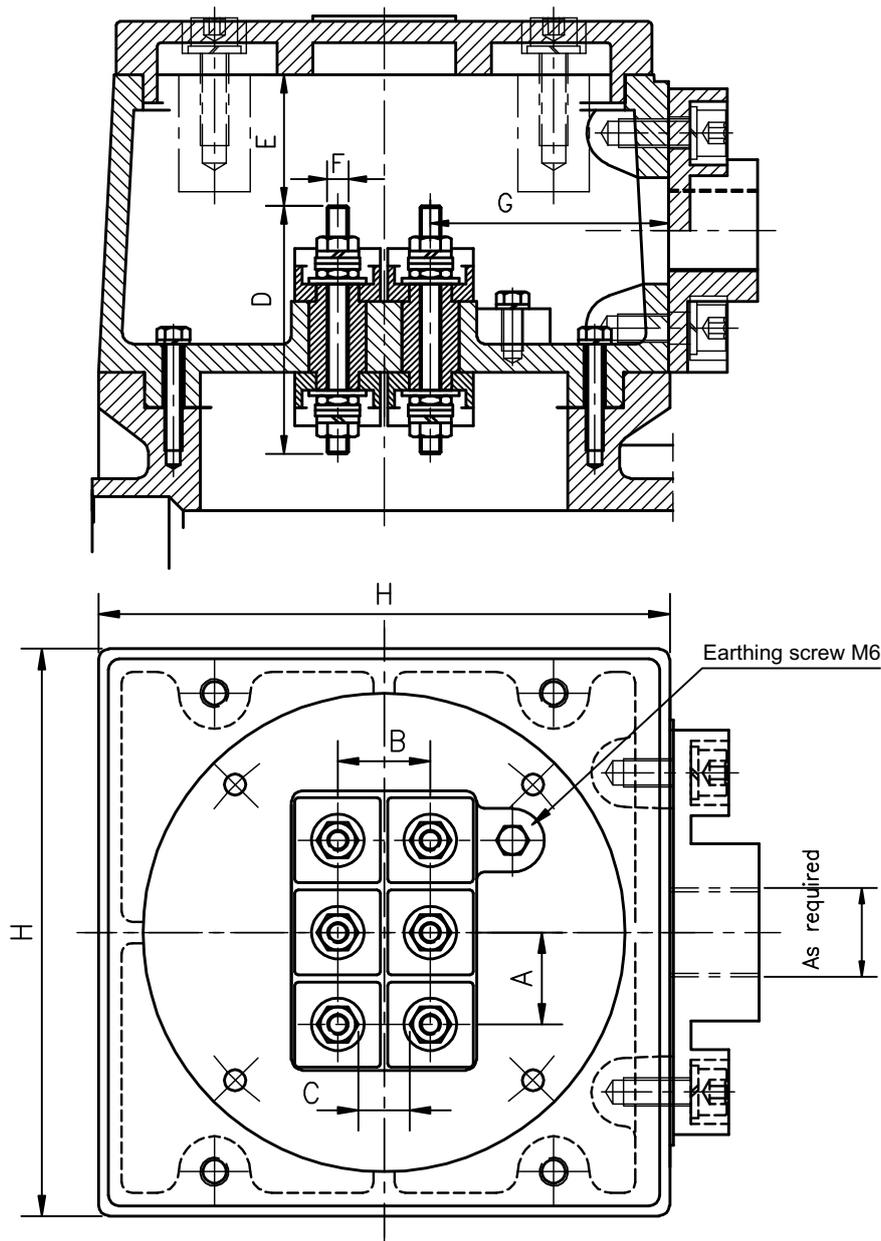

T_{max} = Maximum torque

T_{hot} = Hot withstand time

T_{cold} = Cold withstand time

Note : Owing to continuous updgradation of our design, performance parameters and dimensions are subject to change without prior notice.
